

TROVE Hub Analysis

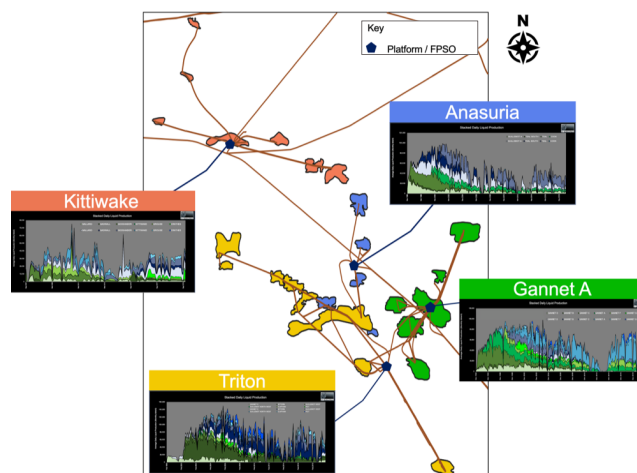

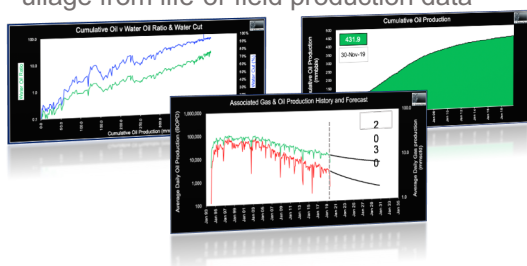

Production Forecasting & Area Analysis Toolkit

Our Hub Analysis toolkit - instant production and area potential understanding for any basin

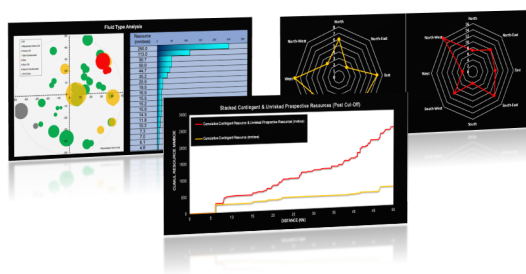

Production Analysis

- Estimate technical Cessation of Production, Ultimate Recoverable Reserves, Remaining Reserves & Recovery Factor
- Visualise production profiles and forecasts for individual fields and production hubs
- Insight to potential production constraints and ullage from life-of-field production data

Area Analysis

- Visualise contingent resource and prospective resource potential for existing or emergent hubs
- Characterise discoveries and prospects by size, distance & fluid properties from the hub

Regional Understanding

- Compare hub reservoir and hydrocarbon properties with the entire basin
- Visualise area infrastructure and current equity holder positions

Comprehensive Technical Reports
